

A TAXONOMIC LISTING OF BENTHIC MACRO- and MEGAINVERTEBRATES

from

Infaunal & Epibenthic Monitoring Programs in the Southern California Bight

EDITION 7

1 July 2012

Prepared by

The Southern California Association of Marine Invertebrate Taxonomists
Natural History Museum of Los Angeles County Research & Collections
900 Exposition Boulevard Los Angeles, CA 90007

The editors of this list intend that it undergo regular updates. SCAMIT hopes to maintain the list as a document useful to those involved with monitoring programs within the Southern California Bight. To this end we solicit the users' assistance. Please forward any comments, corrections, or suggested additions you may have to:

A TAXONOMIC LISTING OF BENTHIC MACRO- and MEGAINVERTEBRATES

from
Infaunal and Epifaunal Monitoring and Research Programs in the Southern California Bight

Prepared by
The Southern California Association of Marine Invertebrate Taxonomists
Donald B. Cadien and Lawrence L. Lovell, editors

EDITION 7

Taxonomic standardization, assuring that the same name is applied to an organism by different taxonomists each time that organism is encountered, is an important quality control concern in any biological monitoring program. Compatibility of taxonomic data generated by agencies and organizations contributing to regional monitoring programs is essential if the full value of these surveys is to be realized. There are two obstacles to achieving the goal of standardization: the complexity and fluidity of invertebrate taxonomy; and the differences in expertise, experience, and opinion of taxonomists involved in monitoring within the region. While these obstacles hinder us from achieving uniformity, a great deal can be accomplished in its pursuit. Central to that effort is regional cooperation and communication among the taxonomists responsible for the surveys.

The Southern California Association of Marine Invertebrate Taxonomists (SCAMIT) was formed in 1982 to promote the study of invertebrate taxonomy and develop a standardized taxonomy of marine invertebrates within the region. Its membership includes most of the taxonomists responsible for conducting infaunal and epifaunal monitoring programs in Southern California coastal waters. SCAMIT's activities include monthly meetings, workshops, and communication of taxonomic information to its membership through a newsletter and website (www.scamit.org/).

This list of invertebrates from benthic habitats of the Southern California Bight (SCB) is a contribution of SCAMIT toward the development of regionally coordinated monitoring within the Bight. This edition updates Edition 6 of July 2011, and continues SCAMIT's efforts to compile and maintain a list of species for which taxonomy is believed standard within the region. That is, a list of species names that are uniformly and consistently applied to organisms in research and monitoring programs within the region. Like earlier editions, this is a conservative document constrained by both the information base from which it is derived and by the criteria for inclusion of taxa on the list.

Caution is required in the use of this or any other "master species" list. Taxonomic listings do not in themselves constitute standardization of taxonomic usage. They are only tools that contribute to standardization, both as a product and in the process of their development and maintenance. Those responsible for developing regional monitoring should not attempt to impose on contributing surveys an artificially rigid taxonomy based upon a static list of standard names. Such an approach would inevitably lead to poorer quality survey data. Some differences in taxonomy and nomenclatural usage will continue to appear in data sets originating from contributing surveys. Most of these will reflect either change in the species encountered or new revisionary work. Some will represent non-standard usage despite efforts such as this listing and other activities of SCAMIT. Regional data-management systems must allow both growth and emendation to their species lists to conform to current usage. Ranasinghe *et al* (2003b) evaluated the success of quality assurance taxonomic standardization

in the second regional monitoring survey Bight '98 (B'98) and provided some idea of both the value of the contributions to standardization made to date and the magnitude of the unresolved issues.

Edition 7 is the first edition available only on-line. It is available as a document in Portable Document Format (pdf), which is fully searchable. This renders the Index provided in previous editions obsolete, and none is provided. The present edition is another step in the evolution to a fully interactive on-line list, where comments and questions regarding the list contents can be made by users in real-time. These future lists will be linked to other resources on the internet, providing additional information on the species covered. We have not yet accomplished this, but look forward to doing so in the near future, possibly by Edition 8.

COVERAGE OF EDITION 7

This document provides a list of macroinvertebrates and megainvertebrates from both soft and hard bottom habitats of the SCB. Holoplanktonic species are not included in the list. For the purposes of the list, macroinvertebrates are defined as those organisms retained upon a 0.3 mm or larger mesh screen. Epibenthic megainvertebrates are defined as benthic organisms captured in otter trawls and having a body dimension greater than 1 cm. The list draws from sampling programs that have been in existence since as early as 1970 (see table of contributors). Over that period, sampling frequencies and station locations have varied but gear types and methods have been stable. The list reflects organisms collected from thousands of samples within the habitats covered. Most records are from soft substrate on the inner to mid shelf within the SCB, but increasingly information on other habitats from the intertidal to the near-shore basins is also represented. Records in the published literature are not sufficient for inclusion, only actual examined specimens form the basis for this listing. There are 3081 species-level taxa on the list representing 18 phyla, 39 classes, 125 orders, and 681 families; a 3% increase in included species over the previous edition.

Geographic coverage is from Point Conception, California to Bahía Todos Santos, Baja California Sur, Mexico in intertidal to 1000m depths. As in previous editions, the information on which the list is base comes from survey data collected in monitoring programs of publicly owned wastewater treatment works (POTWs). Coverage within the Bight is biased by the distribution of sampling efforts associated with these programs. The largest of these are centered on the metropolitan areas of Los Angeles/Orange County and San Diego. The fauna from shelf and upper slope depths in these areas is well represented. North of the

Contributing Programs

LARGE DISCHARGE MONITORING PROGRAMS

- City of Los Angeles, Bureau of Sanitation, Environmental Monitoring Division
- County Sanitation Districts of Los Angeles County
- Orange County Sanitation District
- City of San Diego, Public Utilities Department

SMALL DISCHARGE MONITORING PROGRAMS

- Goleta Sanitary District
- City of Santa Barbara
- Carpinteria Sanitary District
- City of Oxnard
- South East Regional Reclamation Authority
- City of Oceanside
- Encina Water Pollution Control Facility
- San Elijo Joint Powers Authority
- City of Avalon
- International Treatment Plant

MISCELLANEOUS STUDIES

- Terminal Island Treatment Plant Outfall Study
- Tijuana Ocean Engineering Study
- LACSD Reference Survey
- San Diego Sediment Mapping Study
- San Diego Deep Benthic Pilot Study

REGIONAL SURVEYS

- Southern California Coastal Water Research Project Reference Surveys
- 1994 Southern California Bight Pilot Project (SCBPP)
- Southern California Bight 1998, 2003, and 2008 Regional Monitoring Projects (B'98, B'03, B '08)

Los Angeles region, monitoring programs are fewer in number and smaller in scale. Consequently, the fauna of the northern Bight is under-represented. Records from Regional Monitoring Surveys in 1994, 1998, 2003, and 2008 (Allen *et al.* 1998, 2002, 2007, 2012; Bergen *et al.* 1998; Ranasinghe *et al.* 2003a, 2007, 2012) improve coverage in this northern region as well as between POTW monitoring areas. Coverage is poorer south of the US/Mexico border where the only records come from monitoring of the South Bay Ocean Outfall (south to Punta Banderas) and the Mexican component of the Bight '98 Regional Survey (south to Bahía Todos Santos). Records from estuaries, bays, and harbors taken in regional monitoring programs are included here. Salinities may be reduced in such enclosed habitats, but records from waters of less than 12ppt salinity are excluded. This represents the midpoint of mesohaline water salinities, where euryhaline marine species reach their distributional endpoint, and estuarine endemics occur (Boesch 1978). Organisms from fresher oligohaline waters, those characterized as fresh-water species, are not covered in this listing

Most sampling effort has been expended at mid shelf depths of 40 to 80 meters and the fauna from this range is better represented than that of shallower or deeper waters. More information on slope and basin habitats is becoming available, but depths between 300 and 1000m are still poorly represented in Edition 7. Most source programs are restricted to subtidal soft-bottom monitoring, but records from both rocky and soft intertidal habitats and fouling are also included, beginning with Edition 6. Coverage will be far less comprehensive for these habitats initially, but in future editions will approach that of the central shelf. Records are derived from a broad spectrum of sources. Many cooperative programs are underway by state, federal, and other agencies which sample embayments or open coastal intertidal and shallow subtidal habitats. In this edition numerous records from Introduced Species Studies conducted within the SCB were included. Other efforts designed to quantify effects of anthropogenic contaminants and other human usages in bays, harbors and estuaries are also continuing. These include the long series of EMAP programs along the entire west coast of North America, sampling to develop sediment quality objectives, and other efforts. Only records from within the covered geographic portion of these broad scale programs will be included in this listing. Only those records either generated by or subsequently reviewed by SCAMIT member taxonomists or SCAMIT associated taxonomists are admissible. The requirement that use of the included taxon name be standardized within the region is in force here as well.

PROCESS OF COMPIILATION

Because all subsequent editions build on the original, the description of the information sources and compilation process which produced Edition 1 (March, 1994) is restated below.

The base list was compiled from encountered-species lists from the infaunal monitoring programs of the Bureau of Sanitation, Environmental Monitoring Division, City of Los Angeles (CLA,EMD); the County Sanitation Districts of Los Angeles County (CSDLAC); the County Sanitation Districts of Orange County (CSDOC); and the Metropolitan Wastewater Department, City of San Diego (CSD,MWD). The encountered-species lists provided by these agencies covered a range of time spans, from eight to more than 20 years. The base list was broken into phylogenetic groupings (phylum or class level) for review by SCAMIT members with expertise in each group and knowledge of the history of the programs from which the data were derived. This latter factor is important given the long term nature of the programs from which the list was derived. These programs have been in place since as early as 1972. There is substantial potential for confusion of species identities because of the many taxonomists involved over the period. Every species name on the base list was subject to review and discussion prior to acceptance on the final list. Names retained were

those 1) found to have been applied to taxa recognized as unique and 2) for which consensus among SCAMIT reviewers existed as to the name used to represent these taxa. Consensus here does not imply unanimity of opinion, but an agreement to accept a standard use of a name in the interest of regional conformity. Conflicts of opinion were resolved by review of appropriate literature and, in many cases, re-examination of voucher specimens by the reviewers.

Following compilation of the list from the four largest programs, encountered-species lists from monitoring programs conducted by the smaller POTWs in the Bight and studies by the Southern California Coastal Water Research Project (SCCWRP) were reviewed. This latter stage was hindered by the general absence in the smaller monitoring programs of easily accessible databases from which to draw encountered-species lists, frequent changes in contractors performing the sample analysis, and the unavailability of the taxonomists responsible for the data. The encountered-species lists received were typically from the most recent surveys, although the actual time spans were not given. Approximately 10% of the species on the final list were added as a result of review of the small POTW encountered-species lists.

The process of compilation resulted in a list, which is generally exclusive in nature. Many taxa names reported in the contributed species lists were eliminated by the reviewers, frequently because of the absence of voucher specimens or documentation allowing their confirmation. Inevitably, some taxa names eliminated will later be found acceptable. In addition, voucher specimens were not examined in all cases and some taxa deemed uncontroversial may later be discovered to be inconsistent in application or otherwise unacceptable. It is anticipated that this list will grow and change during future updates.

The first edition (1994) drew upon the encountered-species lists of 16 infaunal monitoring programs in the region. Subsequent editions built upon the first through a similar process of addition and emendation. In each edition newly detected taxa were added, nomenclatural revisions were incorporated, and errors in the previous edition corrected. Previously listed names found to be based upon doubtful or unverifiable records were dropped from the list. Provisional species names lacking adequate characterization or uniformity of application within the region were also dropped.

The second edition (1996) included, for the first time, epibenthic invertebrates taken in trawl surveys within the Bight as well as new records from the surveys conducted as part of the 1994 Southern California Bight Pilot Project. This regional project included surveys of mainland coastal soft-bottom infaunal and epibenthic communities from Pt. Conception to the US/Mexico border, employing the same techniques used in POTW monitoring programs.

The third edition (1998) was enlarged by the inclusion of abbreviated synonymies. These presented both valid synonyms and synonyms based upon nomenclatural usage. They were not exhaustive, but rather sought to provide examples of the various combinations under which a name has occurred with an emphasis on usage in the Southern California Bight and the Northeast Pacific. An explanation of the notation employed in synonymies is provided below.

The fourth edition (2001) continued to grow in coverage by accretion. Abbreviated synonymies were continued and enlarged as more information became available. The range of habitats examined expanded by inclusion of the results of the second regional survey (B'98), which added a number of additional samples from bays, estuaries, offshore island shelves, and northwestern Baja California.

The fifth edition (2008) incorporated additional records from habitats little covered in previous editions, particularly the upper continental slope, bay and harbors. It reflected many changes, particularly in the higher structure of the nomenclatural hierarchy, published in the last decade, even revising the number of phyla included in coverage. It reported on additional taxa taken in the B'03 Regional Monitoring Study, expanded coverage into the intertidal zone, and incorporated non-POTW or regional monitoring efforts within the acceptable coverage limits.

The sixth edition (2011) continued the coverage expansions begun earlier, filling in increasing numbers of species from embayment and rocky and sandy intertidal sampling. Most species added during the B'08 regional monitoring were included in this edition. Continued change to higher classification from on-going molecular and combined molecular/morphological based phyletic reexaminations was incorporated, with major changes to Decapod crustaceans in particular. This was the first edition to benefit from the Species List Review Committee. Their efforts increased the effectiveness of the review.

CONVENTIONS

Arrangement of the list is hierarchical. The categories used are phylum, subphylum, class, subclass, infraclass, superorder, order, suborder, infraorder, tribe, superfamily, family, subfamily, genus (subgenus) and species. For ease of use each taxonomic category is offset from the next higher category. Each category above genus is, moreover, indicated directly by inclusion with the taxon name itself to avoid ambiguity (e.g., Subphylum Echinozoa). Arrangement of families is phylogenetic when information is available, and alphabetic otherwise. Genera, and species within them, are arranged alphabetically within each family or subfamily, as appropriate. Authorship is attributed in conformance with ICZN rules. The listing of genus-level identifications (e.g., *Bimeria* sp) represents the degree to which the identities of these taxa are known in the region. This form is also used in cases where the only specimens representing the genus were indeterminable due to absence of diagnostic characters. It is regional practice in monitoring programs to identify some groups of organisms at family or higher level. An example is harpacticoid copepods, which are reported at the ordinal level. For these taxa the term **unidentified** appears in the binomen position. The level at which they are typically reported is indicated by the lowest level taxon provided in the hierarchy.

The degree of detail in the use of higher taxonomic categories varies between groups. In groups where there are both large numbers of species and wide variations in form, numerous categories are listed between the phylum and genus level (arthropods, for example). In poorly represented groups with few species (e.g., cephalochordates) there may be few categories listed between phylum and family.

Within the list the following typographic conventions have been employed:

PHYLUM LEVEL IS ALL CAPS

Family and Subfamily levels are bolded

Genus and species are in italics

Synonyms are indented below currently accepted binomens and not italicized

Included in the list are a number of unpublished provisional species names erected by workers in the area. These names are applied to organisms suspected of being new species or whose identities cannot be determined from available literature. Provisional names are typically in the form of a genus name followed by the word **species** (abbreviated as **sp**) and an alphabetic, alphanumeric, or numeric designator. In provisional binomens, the generic level name is

italicized, while the specific name is not. Synonyms are left un-italicized to help clarify their status. In cases where the allocation of a taxon is uncertain, the levels at which uncertainty exists are indicated (e.g., family uncertain, suborder uncertain, etc.). Ideally, a provisional name is provided as a temporary designation pending resolution of the organism's identity through further research or publication. In practice, many have become long standing, stable, and widely recognized taxa names within the region. Of the 310 unpublished provisional taxa included in Edition 7, some date back to the 1970's. Many of the provisional taxa recognized by SCAMIT member taxonomists have now been described either by the members themselves or by other taxonomists. You will find them on this list as synonyms of formally described taxa. All listed provisionals have been subject to examination and their descriptions distributed through the activities of SCAMIT (1982 to present) or its antecedent, the SCCWRP Taxonomic Standardization Program (1973-1980). For these reasons, as well as the significant proportion (10 %) of the listed taxa they represent, these provisional species names are included in the list. The unpublished provisional names are distinguished from formally erected species and provisional names published in the literature by the symbol § following the author. Authorship is attributed for provisional names to tie them to specific diagnoses. Attribution of authorship of these unpublished names **does not** follow a rule of priority, but attempts to indicate the most recent and/or complete source of information regarding the species. The date provided represents the date of distribution of diagnoses or descriptions. Provisional species names for which there is no regional recognition or available diagnoses are not included. These are numerous, and usually become provisional names whose usage is regionally standardized as voucher sheets on them are distributed.

Three conditional designations are used in the list. The terms **conferre** and **near** (abbreviated as **cf** and **nr**) inserted in the binomen indicates that the organism closely resembles the nominal species but its actual identity is in question. The term complex (**Cmplx**) appended to a name indicates that the listed taxon is recognized as having a high degree of poorly defined variability and may belong to an incompletely discriminated group of species.

The first entry in the synonymy is the name as originally described if it differs from that listed as currently used. Otherwise entries are in alphabetical order. The form in which authorship is provided is used to distinguish the nature of the entries. Examples of the forms used and their meaning are provided below.

Schmitt 1921	Synonym
Schmitt 1921 in part	Partial synonymy
of Holmes 1900	Variant generic placement or variant orthography
of Schmitt 1921 not Blazor 1899	Specific instance of incorrect usage
of authors not Bates 1885	Incorrect usage by several authors
of authors SCB not Baird 1863	Incorrect usage regionally by several authors

Usage cited as "of authors" is not restricted to usage in the literature, but also includes usage in survey results and reports. The acronyms NEP and SCB stand for Northeast Pacific and Southern California Bight respectively.

Each new edition in the past has had name changes and new entries from the previous edition. These modifications were not listed or noted prior to Ed 5, making them hard to find for taxonomists and database managers who were concerned with updating species lists. In Edition 7 all changes from Ed 6 are noted **in red colored font**. This will make finding and noting changes much easier. Rules were established for red color fonting. The rules highlight the

changes to Ed 6 that taxonomists and database managers should be aware of when reporting binomials, authors, or hierarchical position of taxa.

- 1) New name not in Ed 6 (upper hierarchical addition, new species addition either as valid name or synonym).
- 2) Change in status of synonym, elevation to valid name.
- 3) Change in status of valid name, placed in synonymy.
- 4) Spelling correction, red fonting the changed name either genus or species (not the entire binomen) or author.
- 5) Correction to authorship attribution.
- 6) Change in assigned genus.
- 7) **Change in placement within the hierarchy.**

AUTHORITY LIST FOR TAXONOMIC INFORMATION

A broad range of sources was used in construction of this hierarchical listing of organisms. The overall basis is that embodied in “An Annotated Checklist of Marine Invertebrates in the Cold Temperate Northeast Pacific” (Austin 1985). This classification has been superceded in a number of areas by investigations over the past quarter century which aimed to put animal classification on a more phylogenetic basis. These investigations initially used cladistic methods to reassess relationships based on morphological characters. More recent contributions typically utilize molecular data based on sequencing of DNA or protein coding genes. Use of the weight of evidence approach, which combines molecular, morphological, paleontological, and developmental lines of evidence has become increasingly common. These investigations are ongoing, and much uncertainty remains for many groups. A recent synthesis (Cracraft & Donoghue 2004), while still imperfect, can serve as a consensus base for updating the hierarchical relationships used by Austin. Where groups have been revised at higher level based on phylogenetic information in Cracraft & Donoghue, it is so indicated under each group below.

The formation of superfamily names follows recommendation 29A of the “International Code of Zoological Nomenclature” (Ride 1999). With this exception and those listed below, all of the classification above genus-level is derived from Austin (op. cit.). Genus-level taxa names and the distribution of species among genera are derived from multiple sources in the recent literature. Congruence of this list with the World Register of Marine Species (<http://www.marinespecies.org/>) is checked and differences are resolved on a case by case basis by the SCAMIT Species List Review Committee. Differences in this list from the treatment in WoRMS are intentional, and reflect the position of SCAMIT on issues in dispute within the taxonomic community.

Phylum Porifera

This taxon was found to be paraphyletic, and has been separated into two phyla Silicea and Calcarea (see Eernisse & Peterson 2004). In their taxonomic reassessment of the sponges Hooper & van Soest (2002) discussed, but did not adopt this conclusion. It is followed here. Silicea consists of Demospongia and Hexactinellida, while Calcarea consists of the calcareous sponges only. Organization within the sponges below phylum level follows Hooper & van Soest, although level of nominal categories may be changed in conformance with the adoption of the two phylum system. Exceptions to this are based on Lee et al 2007.

Use of subfamilial names in Geodiidae follows Cardenas et al 2010.

Phylum Cnidaria

Modifications follow Cairns et al 2002 unless otherwise indicated.

Placement of Oplorhiza in Campanulinidae follows Hochberg & Ljubenkov 1998.

Placement of species not recorded by Austin follows Ljubenkov 1980.

Most cases which vary from Cairns *et al* are based on information in either the

World Hexacorallian Database

(<http://hercules.kgs.ku.edu/hexacoral/anemone2/index.cfm>) or the World

Hydrozoan Database (<http://www.marinespecies.org/hydrozoa/>).

Phylum Platyhelminthes

Developments in the understanding of this group have been numerous and far-reaching.

The traditional phylum Platyhelminthes as used by Austin has been modified to exclude the Acoela, which with the Nemertodermatida form the Acelomorpha, now considered the sister taxon to all other bilaterians (see Eernisse & Peterson 2004, Littlewood et al 2004). No acoels have yet been taken by surveys within the SCB, and so this change is not reflected in the listing. Other high-level changes within this phylum do require some modifications of the hierarchy as used in Austin, but are also only needed for forms not yet reported on the list. The classification of the Polycladida generally follows Faubel (1983, 1984), with some input from Prudhoe 1985.

Phylum Nemertea

Treatment of Cerebratulidae as Cerebratulinae within Lineidae follows MacEwen 1980.

Phylum Mollusca

The Class Aplacophora as used by Austin has been suggested to be paraphyletic (see Salvini-Plawen & Steiner 1996, Haszprunar 2000), although there is still not complete agreement on the issue (see Scheltema 1996 for a dissenting opinion). The paraphyly seems clear, although just how the Solenogastres and Caudofoveata are related to the Polyplacophora is not (see discussions in Lindberg *et al.* 2004, Salvini-Plawen 2003). The use of the subphyla Adenopoda and Scutopoda follows the recommendations of Barwick & Cadine 2005.

Nomenclature within the chitons follows Stebbins & Eernisse 2009 where it differs from Austin.

Year of publication for taxa erected by Reeve, the Sowerbys, and Gray follows Petit 2007, 2009, and 2012.

Year of publication for taxa erected by P. P. Carpenter between 1864 and 1866 follows Palmer 1958.

General classification of the Gastropoda, and most specifics as well, follows Bouchet & Rocroi 2005 (with Linnaean categories assigned to their clades).

Nomenclature embodied in McLean 2007 was incorporated.

Elevation of Cysticinæ to family rank follows Covert & Covert 1995.

Allocation of genera to families within the Superfamily Conoidea follows Bouchet et al 2011. Phylogenetic arrangement of the families follows Puillandre et al 2011 and is based on their 3 gene derived phylogeny..

Allocation of heterobranch taxa at suprageneric levels follows Mikkelsen 1996.

Placement of *Iselica* in Amathinidae follows Turgeon et al 1998.

Use of Stiligeridae instead of Hermaeidae follows Turgeon et al. 1998.

Placement of *Olea* in Stiligeridae follows Turgeon et al 1998.

Use of Cylichnidae instead of Scaphandridae follows Turgeon et al 1998.
Placement of *Pleurobranchaea* in Pleurobranchaeidae follows Behrens 2004.
Within the Order Nudibranchia superfamily-level taxa are from Abbott 1974; allocation of genera among families follows Behrens 2004.

Classification of the Bivalvia follows Coan, et al 2000, with modifications based on Taylor et al 2007, and Valentich Scott & Skoglund 2010 (Pandoridae only), with additional modifications based on Bieler et al 2010, and Oliver & Taylor 2012.
Innovations to both individual species, generic, familial, and higher classifications by Coan & Valentich Scott 2012 are included throughout the Bivalvia.
Genus and family allocations in Scaphopoda follow Shimek 1995; groups not covered in Shimek follow Turgeon et al 1998.
Formulation of higher taxon names within cephalopods follows Sweeney & Roper 2000, as modified by Nishiguchi & Mapes 2008.

Phylum Sipuncula

Classification follows Cutler 1994, except that Golfingiformes rather than Golfingiiformes is used following Edmonds 2000b. The validity of this morphologically derived system was reinforced by recent combined evidence (morphological/molecular) analysis (Schulze et al 2007).

Phylum Echiura

Class Echiuridea is used rather than Class Echiurida following Edmonds 2000a.
While recent evidence suggests this group nests within the Polychaeta, it has been retained separate here pending resolution of affinities within that group. The polychaete subclade that best accommodates the echiurans remains at issue.

Phylum Annelida

Classification of the Class Polychaeta follows Rouse & Fauchald 1997 and Rouse & Pleijel 2001.

Placement of *Travisia* within the Scalibregmatidae follows Bleidorn et al 2003.

Use of Acoetidae instead of Polyodontidae follows Pettibone 1989.

Use of Pholoidae instead of Pholididae follows Pettibone 1984.

Placement of *Pholoe* in Pholoidae follows Pettibone 1992.

Use of Pilargidae instead of Pilariidae follows Licher 1994.

Revisions within the Syllidae follow Aguado & San Martin 2009, Aguado et al 2011, Lattig & Martin 2009, and San Martin et al 2009.

Nomenclature within the Glyceridae follows the revision of Böggemann 2002, with exceptions.

Nomenclature within the Goniadidae follows the revision of Böggemann 2005, with exceptions.

Use of Nereididae instead of Nereidae follows Pettibone 1971.

Use of Oenonidae instead of Arabellidae follows Orensan 1990.

Inclusion of the Siboglinidae in the Sabellida follows Rouse & Pleijel 2001.

Placement of *Raricirrus* in Ctenodrilidae, follows Petersen & George 1991.

Generic changes within the Flabelligeridae follows Salazar-Vallejo 2007, 2012.

Placement of *Artacamella* in Trichobranchidae follows Holthe 1977.

Use of Longosomatidae instead of Heterospionidae follows Borowski 1995.

Use of Tubificidae to instead of Naididae follows Erseus & Gustavsson 2002.

Arrangements of subfamily assignments within the Polychaeta follow:

Ampharetidae — Fauchald 1977.
Maldanidae — Fauchald 1977.
Nereididae — Fitzhugh 1987.
Phyllodocidae — Pleijel 1991.
Polynoidae — Salazar-Silva 2006.
Sabellariidae — Kirtley 1994.
Sabellidae — Fitzhugh 1989.
Serpulidae — Fitzhugh 1989.
Syllidae — Fauchald 1977.
Terebellidae — Fauchald 1977.

Phylum Arthropoda

Subphylum taxa are from Brusca & Brusca 2003.
Arrangement and nomenclature within the Pycnogonida follows Bamber 2007.
Within Subphylum Crustacea the revised classification of Martin & Davis 2001 (with some emendation from McLaughlin et al 2005) is adopted.
Mysid subfamily arrangement follows the cladistic analysis of Meland & Willassen 2007.
Ordering of the family taxa within Amphipoda follows Bousfield & Shih 1994 and Bousfield 2001, and adopts his infraordinal and superfamily concepts in most cases.
Allocations of taxa and systematic arrangement within superfamilies of amphipods follow:
Corophioidea — Myers & Lowry 2003.
Lysianassoidea — Cadien 2007, as modified by Lowry & Stoddart 2012a, b.
Stegocephaloidea — Berge & Vader 2001.
Talitroidea — Serejo 2004.
Removal of the *Maera*-clade of amphipods from the Melitidae to their own family follows Krapp-Schickel 2008.
Subordinal and superfamilial taxa in Isopoda follow Brandt & Poore 2003.
Family allocations in the Tanaidacea follow Larson & Wilson 2002.
Nomenclature within the Order Decapoda follows De Grave et al 2009, with galatheoids after Ahyong et al 2010.

Phylum Echinodermata

Differences in classification above family are from Maluf 1988, or Kroh & Smith 2010.

Phylum Phorona

No exceptions.

Phylum Brachiopoda

Placement of *Terebratalia* in Dallinidae follows Hochberg 1996.

Phylum Ectoprocta

Use of Annectocymidae instead of Diaperoeciidae follows Soule et al 1995.
Use of Candidae instead of Scrupocellariidae follows Soule et al 1995.
Placement of *Cauloramphus* in Calloporidae follows Soule et al 1995.
Placement of *Celleporaria* in Celloporariidae follows Soule et al 1995.

Phylum Chordata

No exceptions.

ACKNOWLEDGEMENTS

The editors would like to thank the members of the Species List Review Committee and the large number of SCAMIT members who have devoted their time to the origination and maintenance of this taxonomic listing. Comments from non-SCAMIT members have also been received, and are always welcome. The application of many sets of eyes to this list has helped eliminate many errors during its development. The editors gratefully acknowledge the assistance of SCAMIT Webmaster Dean Pentcheff in getting Edition 7 posted. While Edition 7, like previous ones, will undoubtedly have errors, these are the responsibility of the editors alone.

Pecten (Delectopecten) vancouverensis	of J. Burch 1944
Pecten (Pseudamussium) alaskense	of Dall 1921
Pecten (Pseudamussium) arces	Dall 1913
Pecten (Pseudamusum) pedroanus var vancouverensis	of Grant & Gale 1931 in part
Subfamily Chlamydinae	
<i>Argopecten ventricosus</i>	(G. B. Sowerby II 1842)
Pecten ventricosus	G. B. Sowerby II 1842
Aequipecten (Plagioctenium) circularis	of Keen 1958
Argopecten circularis	of Bernard 1983 not (Sowerby 1835)
Chlamys ventricosus	of Tomlin 1928
Chlamys (Aequipecten) ventricosa	of Lamy 1909
Chlamys (Plagioctenium) ventricosum	of Bavay 1936
Pecten inca	d'Orbigny 1846
Pecten fililectus	Li 1930
Pecten filitextus	of Pilsbry 1932
Pecten tumidus	of G. B. Sowerby I 1835 not (Turton 1819)
Pecten (Aequipecten) gibbus var circularis	of Grant & Gale 1931 in part
Pecten (Argus) circularis	of Mörsch 1861
Pecten (Argus) ventricosus	of Mörsch 1861
Pecten (Chlamys) circularis	of Dall 1921
Pecten (Dentipecten) circularis	of Kobelt 1887
Pecten (Plagioctenium) ventricosus	of Dall 1898
<i>Chlamys hastata</i>	(G. B. Sowerby II 1842)
Pecten hastatus	G. B. Sowerby II 1842
Chlamys hericeus	of authors not (Gould 1850)
Chlamys hericius	(Gould 1850)
Pecten altiplectus	Conrad 1857
Pecten altiplicatus	Conrad 1857
Pecten islandicus pugetensis	I. Oldroyd 1920
Pecten denticulatus	A. Adams & Reeve 1848
Pecten rastellinum	Valenciennes 1846
Pecten (Chlamys) hastatus	of Arnold 1903
<i>Crassadoma gigantea</i>	(J. E. Gray 1825)
Lima gigantea	J. E. Gray 1825
Chlamys (Hinnites) gigantea	of Bernard 1983
Hinnita giganteus	of Gray 1826
Hinnita poulsoni	Conrad 1834
Hinnites giganteus	of Cadion 1980
Hinnites multirugosus	of Fitch 1953
Pecten (Chlamys) multirugosus	Gale 1928
Pecten (Pecten) multirugosus	of Grant & Gale 1931
<i>Leptopecten latiauratus</i>	(Conrad 1837)
Pecten latiauratus	Conrad 1837
Pecten latiauritus	of authors not Conrad 1837
Pecten monomeris	Conrad 1837
Pecten (Aequipecten) latiauratus	of Grant & Gale 1931
Pecten (Chlamys) latiauritus var delos	Arnold 1906
Pecten (Leptopecten) latiauratus	of Hertlein 1935
Pecten (Plagioctenium) latiauratum	of Bavay 1936
Family Propeamussiidae	
<i>Cyclopecten benthalis</i>	Grau 1959
<i>Cyclopecten catalinensis</i>	(Willett 1931)

<i>Trichocarcinus walkeri</i>	Holmes 1900
<i>Metacarcinus anthonyi</i>	(Rathbun 1897)
<i>Cancer anthonyi</i>	Rathbun 1897
<i>Metacarcinus gracilis</i>	(Dana 1852)
<i>Cancer gracilis</i>	Dana 1852
<i>Romaleon antennarium</i>	(Stimpson 1856)
<i>Cancer antennaria</i>	Stimpson 1856
<i>Cancer antennarius</i>	of Rathbun 1930
<i>Romaleon branneri</i>	(Rathbun 1926)
<i>Cancer branneri</i>	Rathbun 1926
<i>Cancer gibbosulus</i>	Rathbun 1898
<i>Romaleon jordani</i>	(Rathbun 1900)
<i>Cancer jordani</i>	Rathbun 1900
Superfamily Portunoidea	
Family Portunidae	
<i>Portunus xantisii</i>	(Stimpson 1860)
<i>Achelous xantisii</i>	Stimpson 1860
<i>Neptunus xantisii</i>	of A. Milne Edwards 1879
Superfamily Xanthoidea	
Family Panopeidae	
Subfamily Panopeinae	
<i>Lophopanopeus bellus</i>	(Stimpson 1860)
<i>Xantho bella</i>	Stimpson 1860
<i>Lophoxanthus bellus</i>	of A. Milne Edwards 1879 in part
<i>Lophoxanthus diegensis</i>	Rathbun 1900
<i>Lophozomyrus (Lophoxanthus) bellus</i>	of Miers 1886
<i>Xantho hemphilliana</i>	of Lockington 1877
<i>Xanthodes hemphillii</i>	Lockington 1877
<i>Lophopanopeus frontalis</i>	(Rathbun 1893)
<i>Lophozomyrus (Lophoxanthus) frontalis</i>	Rathbun 1893
<i>Lophoxanthus frontalis</i>	of Holmes 1900
<i>Lophopanopeus leucomanus</i>	(Lockington 1877)
<i>Xanthodes leucomanus</i>	Lockington 1877

Lophopanopeus heathi	Rathbun 1900
Lophoxanthus bellus	of A. Milne Edwards 1879 in part
Lophoxanthus leucomanus	of Holmes 1900
Subfamily Eucratopsinae	
<i>Malacoplax californiensis</i>	(Lockington 1877)
Eucrate ? californiensis	Lockington 1877
Speocarcinus californiensis	of Schmitt 1921
Family Xanthidae	
Subfamily Xanthinae	
<i>Paraxanthias taylori</i>	(Stimpson 1861)
Xanthodes taylori	Stimpson 1861
Xanthias taylori	of Holmes 1900
Superfamily Pilumnoidea	
Family Pilumnidae	
<i>Pilumnus spinohirsutus</i>	(Lockington 1876)
Acanthus spino-hirsutus	Lockington 1876
Superfamily Pseudozioidae	
Family Pilumnoididae	
<i>Pilumnoides rotundus</i>	Garth 1940
Superfamily Pinnotheroidea	
Family Pinnotheridae	
Subfamily Pinnotherinae	
<i>Fabia concharum</i>	(Rathbun 1893)
Cryptophrys concharum	Rathbun 1893
<i>Fabia subquadrata</i>	Dana 1851
Raphonotus subquadratus	of Rathbun 1904
<i>Opisthopus transversus</i>	Rathbun 1893
<i>Pinnotheres pugettensis</i>	Holmes 1900
<i>Scleroplax granulata</i>	Rathbun 1893
Scleroplax granulatus	Rathbun 1893
Pinnixa (Scleroplax) granulata	of Holmes 1900
Subfamily Pinnothereliinae	
<i>Pinnixa barnharti</i>	Rathbun 1918
Pinnixa faba	of Rathbun 1904 in part not (Dana 1851)
Pinnixa tumida	of Streets 1877 not Stimpson 1858
<i>Pinnixa forficulimanus</i>	Zmarzly 1992
<i>Pinnixa franciscana</i>	Rathbun 1918
<i>Pinnixa hiatus</i>	Rathbun 1918
<i>Pinnixa littoralis</i>	Holmes 1894
<i>Pinnixa longipes</i>	(Lockington 1876)
Tubicola longipes	Lockington 1876
<i>Pinnixa minuscula</i>	Zmarzly 1992
<i>Pinnixa occidentalis</i> Cmplx	
Pinnixa californiensis	Rathbun 1893
Pinnixa occidentalis	Rathbun 1893 in part
Pinnixa scamit	Martin & Zmarzly 1994
<i>Pinnixa schmitti</i>	Rathbun 1918
Pinnixa occidentalis	of Rathbun 1904 not Rathbun 1893
<i>Pinnixa tomentosa</i>	Lockington 1876
Pinnixa ? nitida	Lockington 1876
<i>Pinnixa tubicola</i>	Holmes 1894
Pinnixa longipes	of Weymouth 1910 not (Lockington 1876)
Superfamily Palicoidea	
Family Palicidae	
<i>Palicus cortezi</i>	(Crane 1937)
Cymopodia cortezi	Crane 1937
<i>Palicus lucasii</i>	Rathbun 1898
Cymopolia lucasii	of Rathbun 1930
Superfamily Grapoidea	
Family Grapsidae	
<i>Pachygrapsus crassipes</i>	Randall 1839
Grapsus eydouxi	H. Milne Edwards 1853
Leptograpsus gonagrus	H. Milne Edwards 1853

	Family Agneziidae	
	<i>Agnezia septentrionalis</i>	
	Agnesia septentrionalis	(Huntsman 1912)
	Agnesia beringia	Huntsman 1912
Order Stolidobranchiata		
	Family Styelidae	

<i>Botrylloides diegensis</i>	Ritter & Forsyth 1917
<i>Botrylloides perspicuum</i>	(Herdman 1886)
<i>Botrylloides perspicuum</i>	Herdman 1886
<i>Botrylloides violaceus</i>	Oka 1927
<i>Botryllus schlosseri</i>	(Pallas 1766)
<i>Alcyonium schlosseri</i>	Pallas 1766
<i>Cnemidocarpa rhizopus</i>	(Redikorzev 1907)
<i>Styela rhizopus</i>	Redikorzev 1907
<i>Cnemidocarpa cirrata</i>	Årnäs 1922
<i>Cnemidocarpa sabulifera</i>	Hartmeyer 1923
<i>Styela sabulifera</i>	of Ritter 1913
<i>Metandrocarpa taylori</i>	Huntsman 1912
<i>Polyandrocarpa zorritensis</i>	(Van Name 1931)
<i>Stolonica zorritensis</i>	Van Name 1931
<i>Styela canopus</i>	Savigny 1816
<i>Styela barbata</i>	Kott 1952
<i>Styela partita</i>	(Stimpson 1852)
<i>Styela rectangularis</i>	Kott 1952
<i>Styela clava</i>	Herdman 1881
<i>Styela barnhardti</i>	of Van Name 1945 not Ritter & Forsyth 1917
<i>Styela coriacea</i>	(Alder & Hancock 1848)
<i>Cynthia coriacea</i>	Alder & Hancock 1848
<i>Ascidia lovenii</i>	M. Sars 1851
<i>Cynthia placenta</i>	Packard 1867
<i>Goniocarpa coccodes</i>	Huntsman 1912
<i>Goniocarpa coriacea</i>	of Huntsman 1912
<i>Goniocarpa lovenii</i>	of Huntsman 1912
<i>Goniocarpa placenta</i>	of Huntsman 1912
<i>Styela lovenii</i>	of Ritter 1913
<i>Styela lovenii</i>	of Hartmeyer 1914
<i>Tethym coriaceum</i>	of Hartmeyer 1912
<i>Tethym lovenii</i>	of Hartmeyer 1912
<i>Styela gibbsii</i>	(Stimpson 1864)
<i>Cynthia gibbsii</i>	Stimpson 1864
<i>Tethym gibbsii</i>	of Hartmeyer 1909-1911
<i>Styela montereyensis</i>	(Dall 1872)
<i>Cynthia montereyensis</i>	Dall 1872
<i>Clavellinopsis rubra</i>	Fewkes 1889
<i>Styela rubra</i>	of Ritter 1896
<i>Tethym montereyense</i>	of Hartmeyer 1909-1911
<i>Styela plicata</i>	(Lesueur 1823)
<i>Ascidia plicata</i>	Lesueur 1823
<i>Styela gyroa</i>	Heller 1877
<i>Styela barnharti</i>	Ritter & Forsyth 1917
<i>Tethym plicatum</i>	of Hartmeyer 1909-1911
<i>Styela truncata</i>	Ritter 1901
<i>Katatropa uclueletensis</i>	Huntsman 1912
<i>Katatropa vancouverensis</i>	Huntsman 1912
<i>Tethym truncatum</i>	of Hartmeyer 1909-1911
<i>Symplegma brakenhielmi</i>	(Michaelsen 1904)
<i>Diandrocarpa brakenhielmi</i>	Michaelsen 1904
<i>Symplegma reptans</i>	(Oka 1927)
<i>Synstyela reptans</i>	Oka 1927
Family Pyuridae	
<i>Bathypora feminalba</i>	Young & Vazquez 1995
<i>Bathypora ovoida</i>	(Ritter 1907)
<i>Halomolgula ovoida</i>	Ritter 1907
<i>Bathypora splendens</i>	Herdman 1923 in part
<i>Boltenia echinata</i>	(Linnaeus 1767)
<i>Ascidia echinata</i>	Linnaeus 1767
<i>Ascidia hirsuta</i>	Agassiz 1850
<i>Boltenia hirsuta</i>	of Huntsman 1912
<i>Cynthia arctica</i>	Hartmeyer 1899
<i>Cynthia echinata</i>	of Stimpson 1854
<i>Halocynthia echinata</i>	of Ritter 1913
<i>Boltenia villosa</i>	(Stimpson 1864)
<i>Cynthia villosa</i>	Stimpson 1864
<i>Halocynthia castaneiformis</i>	of Ritter 1913
<i>Halocynthia villosa</i>	of Ritter 1907
<i>Halocynthia igaboja</i>	Oka 1906

<i>Halocynthia okai</i>	Ritter 1907
<i>Pyura okai</i>	of Hartmeier 1909-1911
<i>Tethyum igaboja</i>	of Huntsman 1912
<i>Microcosmus squamiger</i>	Hartmeyer & Michaelsen 1926
<i>Microcosmos exasperatus</i>	of authors NEP not Heller 1878
<i>Pyura haustor</i>	(Stimpson 1864)
<i>Cynthia haustor</i>	Stimpson 1864
<i>Cynthia erecta</i>	Ritter 1900
<i>Cynthia macrosiphonius</i>	Ritter 1900
<i>Halocynthia haustor</i>	of Ritter 1909
<i>Halocynthia haustor foliacea</i>	Ritter 1913
<i>Halocynthia johnsoni</i>	Ritter 1909
<i>Halocynthia washingtonia</i>	Ritter 1913
<i>Pyura lignosa</i>	Michaelsen 1908
<i>Pyura mirabilis</i>	(von Drasche 1884)
<i>Cynthia mirabilis</i>	von Drasche 1884
<i>Halocynthia mirabilis</i>	of Oka 1906
<i>Microcosmus transversus</i>	Ritter 1907
Family Molgulidae	
<i>Bostrichobranchus pilularis</i>	(Verrill 1871)
<i>Molgula pilularis</i>	Verrill 1871
<i>Eugyra arenosa californica</i>	Van Name 1945
<i>Molgula ficus</i>	(Macdonald 1859)
<i>Caesira ficus</i>	Macdonald 1859
<i>Molgula manhattensis</i>	Macdonald 1859
<i>Ascidea manhattensis</i>	(DeKay 1843)
<i>Molgula napiformis</i>	DeKay 1843
<i>Molgula pugetensis</i>	G. Lambert 1993
<i>Caesira apoploa</i>	Herdman 1898
<i>Caesira pugetensis</i>	Huntsman 1912
<i>Molgula regularis</i>	of Huntsman 1912
<i>Caesira regularis</i>	Ritter 1907
<i>Euritteria regularis</i>	of Hartmeyer 1901-1911
<i>Molgula verrucifera</i>	of Huntsman 1922
<i>Molgula sp SD1</i>	Ritter & Forsyth 1917
Subphylum Cephalochordata	Lilly 1999 §
Family Branchiostomatidae	
<i>Branchiostoma californiense</i>	(Andrews 1893)
<i>Amphioxus californiense</i>	Andrews 1893
