Goniada brunnea (Treadwell, 1906)

079, ...
... ..

Goniadidae

Date Examined and Code: February 14, 1983, OC 14

Keys Used: Hartman, O. 1968 (Atlas) p. 653

Other Literature: Hartman, O. 1950 p. 17
Banse, K. and K.D. Hobson. 1974 p. 81

Important Characters: Notopodia with slender hairlike setae; posterior and median neuropodia with 2 presetal lobes; proboscideal organs broadly flaring (fig. 1); notopodium with small postsetal lobe.

Related Species and Character Differences: Goniada maculata - proboscideal organs are slightly flaring (fig. 2) and heart shaped; notopodium without postsetal lobe.

Comments: Occurs in low intertidal depths to over 1200 meters between Alaska and southern California.

post setal lobe present on notopodia

Fig. 1 (Hartman, 1950: p. 145)

Fig. 2 (Hartman, 1950: p. 145)

Large animal - 7" - 3.5" one specimen in original 15 mm parapodial change at 44/45 in Hartman
