Neoleprea spiralis (Johnson, 1901)  
Terebellidae

SCAMIT Code: AHF 42  
Date Examined: November 12, 1985  
Voucher by: Susan Williams

LITERATURE: Banse, 1980  
Hartman, 1969  
Hobson & Banse, 1981

DIAGNOSTIC CHARACTERISTICS:

1. Notosetae (Fig. 1) on 35-40 segments; distally dentate.
2. Uncini (Figs. 2, 3) from setiger 3; in single rows for six segments, then in double rows to the end of the thorax. Abdominal uncini in single rows.
3. Branchiae two pairs, each with a stem and many distal branches (Fig. 4).

RELATED SPECIES AND DIFFERENCES:

Neoleprea japonica: notosetae on about 25 segments.

DISTRIBUTION: Alaska to California; littoral zone.

Figures from Hartman, 1969
