**Pista wui** Saphronova, 1988

Specimen: Methyl green stained  
City of San Diego, ITP Survey  
I-16 rep.1  2July1996  93 ft

Branchiae contracted

R. Rowe 3Aug2002
The terminal branching is more easily seen in less contracted specimens (e.g. ITP 1-35 rep. 2 4Jan2001)

Note the spiral arrangement of the branchial branches most evident in those branchiae that are preserved in a more contracted state (e.g. ITP 1-16 rep. 1 2July1996)
