

TRICHOBRANCHIDAE OF POINT LOMA

(Check both sides of animal)

Trichobranchidae
K. Langan 8/1/97

Notosetae of setiger 1 clearly longer than notosetae of following setigers

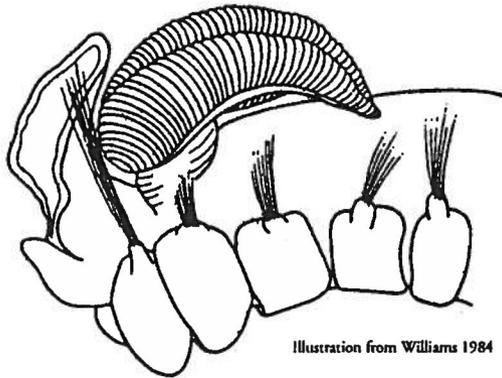

Illustration from Williams 1984

Terebellides californica Williams 1984

other characters:

- setiger 1 notopod prolonged

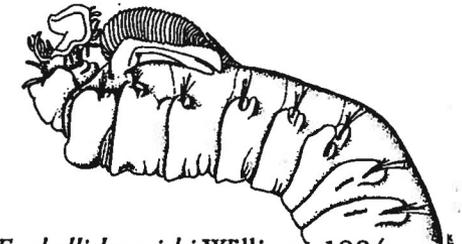

Notosetae of setiger 1 subequal to notosetae of following setigers

Abdominal setigers number
27-35

Posterior end missing

Terebellides sp

Abdominal setigers number
40-55

Terebellides reishi Williams 1984

other characters:

- setiger 1 notopod not prolonged

Area of glandular expansion **is present** on setiger 3;
setiger 3 is **wider than** setiger 2 and setiger 4

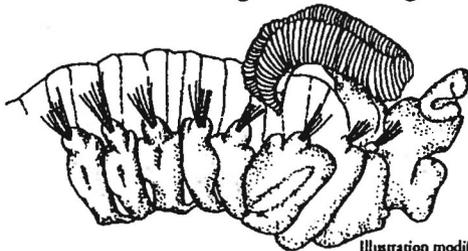

Illustration modified from *Terebellides hobei* Imajima and Williams 1985

Terebellides sp Type D Williams 1984

other characters:

- setiger 1 notopod slightly prolonged
- number of abdominal setigers = 30-35

Area of glandular expansion **is lacking** on setiger 3;
setiger 3 is **same width** as setiger 2 and setiger 4

Illustration from Williams 1984

Terebellides sp Type C Williams 1984

other characters:

- setiger 1 notopod not prolonged
- number of abdominal setigers = 27-31
