

# *Eohaustorius barnardi*

## Diagnostic Characters:

Rostrum moderate to weak  
Coxa 1-4 enlarging, coxa 4 dominate  
Gnathopods feeble and simple  
Pereopod 4 smaller and unlike pereopod 3, reversed in orientation

P7, basis not wider than deep, hind cusp acute  
P7, basis hind marginal tooth weak or rounded  
Pleon plate 3, process strong  
P4, segment 5, distal lobe base smooth  
P6, segment 4 with at least one other spine cluster above lower row  
P6, segment 5, lacking posterior marginal spines  
P6, segment 4 subtriangular, widest distally, length <2X width; basis as broad or broader than length  
Pleon plate 3, hind process nearly straight, if hooked, not recurved  
P4, segment 5, hind lobe shorter, deeper, length less than 2X depth
