Species: Munna stephenseni

Deserber: Gurjanova

Date: 1938

Common Name: Isopod

Family: Munidae

Museum Number: 83

Common Name: 'Iso P'od

Source: Proceedings of the National Museum Vol. 102 Marine Asellote Isopods by Menzies

Marin County, California

Synonomy: Locations

Distinguishing Characteristics:

Eyes on short immovable stalks, preorbital lobes strong. Pletelson with two to three large 2-pointed setae on each side anterior to uropods. Body covered with setae, which are especially evident at posterior border of pleotelson. Ventral uropodal branch with a strong posteromedially directed spinelike tooth at postero medial angle, in addition to several smaller teeth.
