SYNONOMY: Enopla sp 1 Pasko 2019

LITERATURE:

DIAGNOSTIC CHARACTERS (from a single specimen, Bight’18, Statino 10438, 3.3m)
• Small species, 2.3mm long, with roughed epidermis
• Eyes 3 pairs of closely set, crescent-shaped eyes anteriorly plus a fourth(?) pair adjacent to brain
• Proboscis sheath approximately ½ the length of the body
• Stylet apparatus located mid-body; stylet subequal to or slightly longer than basis; basis slightly broadened in mid-region and narrowed at its base, which is flat and narrower than proximal end (at insertion of stylet)
• Accessory pouch with a single accessory stylet present

Similarities:
• Differs from all currently recognized enoplans in the roughend epidermis and fairly distinctive stylet apparatus.

Hoplonemertea sp DC1 SCAMIT 2007
Nemertea: Hoplonemertea: Monostilifera

Prepared April 19, 2023; D Pasko
Hoplonemertea sp DC1, dorsal view, cleared

Hoplonemertea sp DC1, dorsal view, anterior cleared

Hoplonemertea sp DC1, Stylet apparatus (below) with accessory stylet (above)
