Species: Cythorella sp A

Describer:   Date:   Family:   
Common Name:   
Source:   

Synonym:   Location:   

Distinguishing Characteristics:

- Suboval from lateral view, but dorsal and ventral margins parallel.
- Anteroventral border with some setae.
- From dorsal view carapace tapers evenly, widest at anterior end.
- No distinct eyespot present.
- Caudal furca observed with 1 claw bent back (plumulose at end), and 7 or 8 more as illustrated.
- Appendages quite similar to C. abyssorum, Sars (not however caudal furca).

Carapace fairly heavily calcified.
