

Notomastus sp. SF1
Norris, D.

RMP BC11
0809055690
Sep. 28, 2008

Characters:

1. Capillary setae in notopodia and neuropodia thru setiger 11 (notosetae only on setiger 1).
2. Hooks surmounted with secondary teeth and are closely hooded
3. MG stain in bands around setae on setigers 9-11, then dorsally on setigers 19-45 (may continue on other specimens since this specimen was regenerating the posterior portion of the worm). No stain on the abdominal ventrum.
4. Red eye spots clearly visible on the prostomium
5. specimen length 16 mm.
