

Pictorial Key to the *Drilonereis* species of California

By

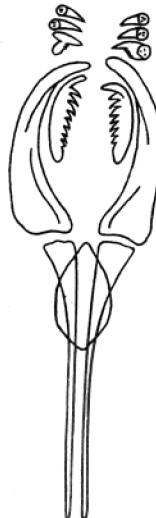

Lawrence L. Lovell, LACSD

1a. Maxillae I with dentate base

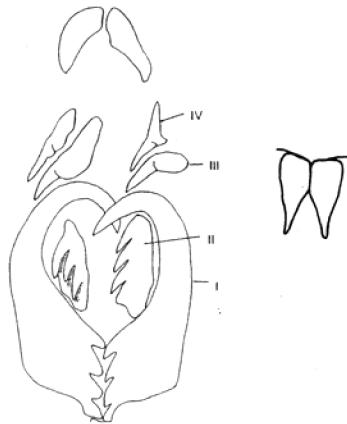

Go to 2

1b. Maxillae I with smooth base

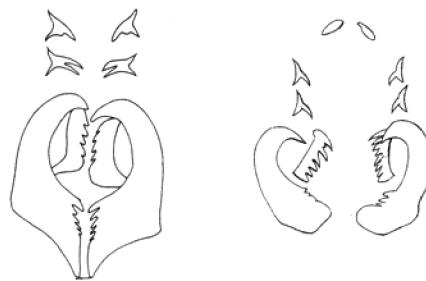

Go to 7

2a. Mandibles present, well developed

Go to 3

2b. Mandibles absent or reduced

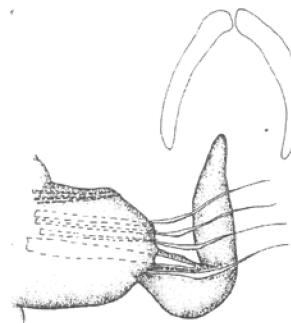

Go to 5

3

3a. Mandibles triangular fused at base

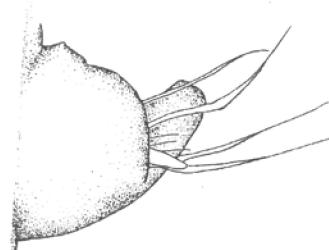

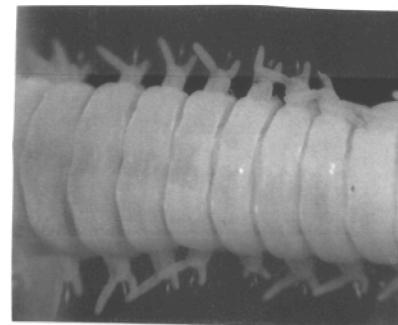

3b. Mandibles rod-like, not fused

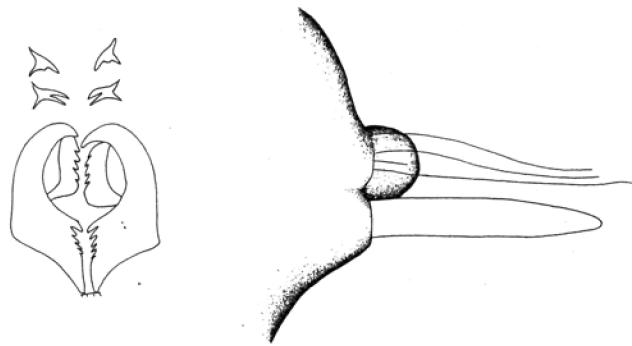

Go to 4

4a. Posterior body with short post-setal lobes.

*Drilonereis spectabilis*  
Hilbig, 19954b. Posterior body with long pre-  
and post-setal lobes, pre-setal  
longest.*Drilonereis falcata*  
Moore, 1911*Drilonereis* sp LA1 Lovell, 2006§

5a. Mandibles absent, posterior body with papillar post-setal lobe

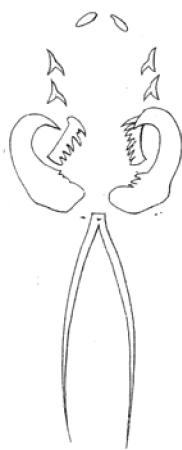

5b. Mandibles reduced or absent, posterior body with digitate, pre- and post-setal lobes.

*Drilonereis mexicana*  
Fauchald, 1970

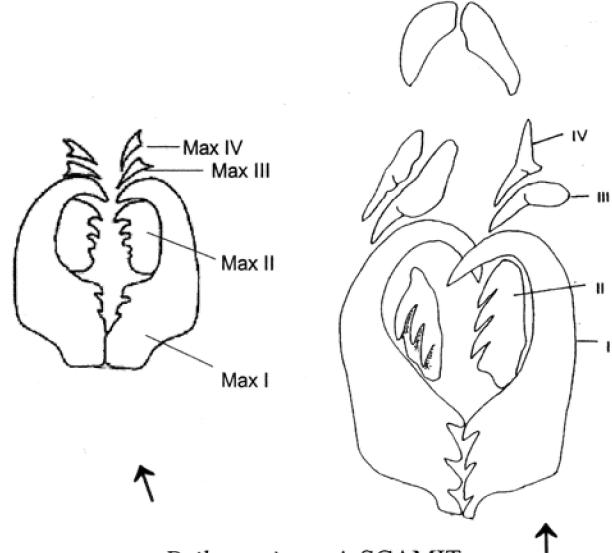

Go to 6

6a. Maxillae II w/ 6-8 teeth

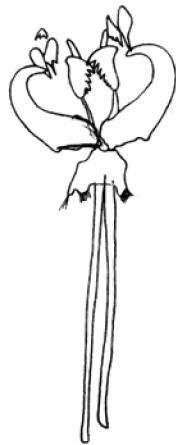

*Drilonereis longa*  
Webster, 1879

6b. Maxillae II w/ 3-4 teeth

*Drilonereis sp. A SCAMIT*  
*Drilonereis longa* of Hilbig, 1995

7a. Mandibles absent

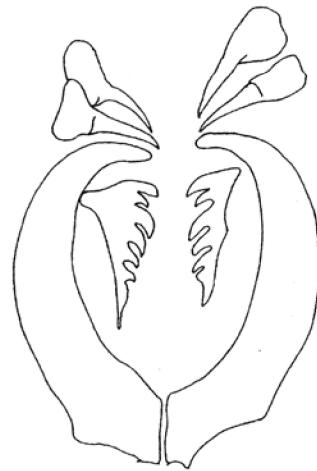

7b. Mandibles present

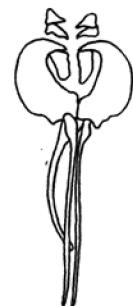

Go to 8

*Drilonereis filum*  
(Claparede, 1868)

8a. Maxillae II w/5-7 large teeth

8b. Maxillae II smooth, w/o teeth

*Drilonereis nuda*  
Moore, 1909

*Drilonereis forcipes*  
(Hartman, 1944)

## Table of Drilonereis species of California

By Lawrence L. Lovell, LACSD  
September 2006

Taxa	Mandibles	M I base	M II	M III	M IV	M V	anterior setal lobes	posterior setal lobes	notes
<i>D. falcata</i> Moore, 1911	long,triangular, fused at widest part	dentate	6-7 teeth (Hartman '68); 6-9 teeth (Hilbig '95)	3 teeth; 1 lg, 2 sm (Hilbig, 95); 1 (Hartman, 68)	1 tooth	1 tooth	pre- truncate, post-conical	pre short; post long	
<i>D. spectabilis</i> Hilbig, 1995	large rodlike	dentate	asymetrical L-8 large, 3 small; R-6 large, 3 small	large main and 4 small	1 tooth	1 tooth	pre truncate, post conical, conspicuous	pre conical; post foliaceous past set.70	
<i>D. longa</i> Webster, 1879	reduced or absent	dentate	Holo 6-8 teeth(Harris); 6-8 teeth(Hartman, '68); 3-4 teeth(Hilbig, '95)	1 tooth	1 tooth	absent	pre-none; post- short, papillar	pre and post long	M II counts need clarification
<i>D. sp. A</i> SCAMIT, 1998§	reduced or absent	dentate	3-4 marginal teeth	1 tooth	1 tooth	?	pre-none; post- short, papillar	pre and post long	can be parasitic, M II counts need clarification
<i>D. sp LA1</i> Lovell 2006§	well developed, triangular	dentate	5-6 teeth	1 tooth	1 tooth	absent	pre absent, short post	pre and post long, pre longer on most set.	this is a new provisional
<i>D. mexicana</i> Fauchald, 1970	absent	dentate	4 teeth	2 teeth	1 tooth	absent	pre-none; post- short, papillar	pre none; post short, papillar	acicula projecting??
<i>D. filum</i> (Claparedede, 1868)	well developed	smooth	5 (Claparedede, 1868); 9 (Fauchald, 1970) as D.? filum	3 (C, 1868) 6 (F, 1970)	1 (C, 1868) 3 (F, 1970)	absent (C, 1868) 1 (F, 1970)	pre-rounded post-conical	pre short; post digitate, 2X pre	
<i>D. forcipes</i> (Hartman, 1944)	absent	smooth	smooth, no teeth	1 tooth	1 tooth	absent	pre truncate, post short	pre truncate; post short	parasitic
<i>D. nuda</i> Moore, 1909	absent	smooth	5-7 large teeth	1 tooth, long and pointed	1, long and pointed	absent, or when present 2 minute teeth (Hilbig, '95)	pre-truncate post-conical	pre short; post long
