Nicolea sp A fide Harris 1985

Next up was *Nicolea* sp A Harris 1985. There is a voucher sheet for this species in the SCAMIT newsletter Volume 4 No. 11, 1985. Rick Rowe (CSD) also showed us his photo sheet for this species. Leslie showed us a chart of described species of *Nicolea*. The genus needs to be revised because several of the characters used to separate the species are not good, such as the number of teeth above the main fang, number of denticles, and size of nephridial pores. Leslie has only found *Nicolea* in harbors and suggested that it may be introduced. We viewed a specimen of *Nicolea* sp A and observed the nephridial papillae on segments 3, 6, and 7.
